FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table I, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Tables 4 and 5 provide information on approvals granted by the Municipal Welfare Administration Branch for 100 per cent subsidies under Reg. 16. The text of Reg. 16 and comments on the meaning of these tables are to be found on page 4 of the bulletin. Tables 4 and 5 are included in the bulletin quarterly.

Child Welfare

To provide a more complete picture of the Ministry's services, a new section of statistical information has been included in the bulletin for the first time. It consists of tables providing data pertaining to children in the care of Children's Aid Societies.

It should be noted that for comparative purposes the basic data will be reported quarterly. However, additional tables will be included on an ad hoc basis, in every issue of the statistical bulletin.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Unemployment Statistics (Continued)

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified

Unemployment Statistics (Continued)

or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two major income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 61,428 or 8,302 below the January 1972 level. Compared to that month, male single persons decreased by 16.2 per cent, while female single persons increased by 1.3 per cent. Hostel residents increased by 13.3 per cent. Male and female headed family units decreased by 16.3 per cent and 1.7 per cent respectively.

The lower caseload of Family Units compared to the previous year is reflected in the 14.2 per cent reduction in beneficiaries from 152,838 in 1972 to 131,171 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.6 persons.

In comparison to December 1972, all categories of single persons and family units increased by 4,268 cases or approximately 8.0 per cent.

As has been indicated in the April 1972 bulletin, the introduction of Extended Care Insurance Benefits for persons who need a specified degree of nursing care in certain institutions, necessitated a change in reporting procedures in Table 3. As a result, the Nursing Home recipients are reported

Highlights(Continued)

on the basis of coverage by Extended Care or Intermediate Care. (For more detailed information on eligibility and per diem charges see the April 1972 bulletin). Of the total of 3,341 Nursing Home recipients, 2,547 or 76.2 per cent were covered by Extended Care Health Insurance.

Table 1 provides a geographic distribution of the number of beneficiaries in January 1972 and 1973. While the number of General Assistance beneficiaries averaged 2.0 per cent of the population in January 1973, it ranged from 0.5 per cent in Halton County Unit and Chinguacousy Township to 4.7 per cent in Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 2.0 and 2.7 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled about \$8.0 million in January 1973 or 13.8 per cent lower than the January 1972 expenditure of About \$9.3 million. A factor contributing to the lower level of expenditure was the noticeable decline in the caseload of family units which have higher budgetary need than that of single persons.

RESIDENCE

Regulation 16 of the General Welfare Assistance Act states:

(1) For the purposes of the Act and this Regulation, where an applicant or recipient during any part of the period of twelve consecutive months immediately preceding his application for assistance,

- (a) has not resided in Ontario; or
- (b) has resided in Ontario in territory without municipal organization,

the municipality or the council of the approved band that provides assistance to him in accordance with this regulation shall be entitled to reimbursement by Ontario for the full amount expended for such assistance until such time as he has resided for a period of twelve consecutive months, in Ontario in territory with municipal organization or on a reserve of an approved band.

(2) Where the municipality or the council of an approved band is entitled to reimbursement under subsection 1, the municipality or council, as the case may be, shall notify the Director within sixty days of the date on which it makes the first payment to the recipient that the recipient is deemed to reside in territory without municipal organization.

The following tables are based on the approvals granted by the Municipal Welfare Branch for 100% subsidy under Reg. 16. Once an approval has been granted, it is effective until the recipient has resided in the municipality for twelve consecutive months. Regulation 16(2) makes it possible for subsidy to be claimed for assistance that was issued up to 2 months before the request for approval was made. It should be stressed that Tables 4 and 5 provide data on the number of approvals granted for specified months rather than the number of approvals which were effective in those months.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

It should be noted that for comparative purposes the basic data are reported quarterly. However, additional tables are included on an ad hoc basis, in every issue of the statistical bulletin.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Unemployment Statistics (Continued)

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4-6 weeks after the claim has been disqualified

Unemployment Statistics (Continued)

or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two major income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 59,238 or 8,173 below the February 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 18.5 per cent and 3.0 per cent respectively. Hostel residents increased by 13.0 per cent. Male headed family units decreased by 22.3 per cent, while female headed family units remained near the February 1972 level.

The much lower caseload of male headed family units compared to the previous year is reflected in the 17.6 per cent reduction in beneficiaries from 151,251 in 1972 to 124,624 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.6 persons.

Highlights (Continued)

In comparison to January 1972, all categories of single persons and family units decreased by 2,168 cases or 3.8 per cent.

As has been indicated in the April 1972 bulletin, the introduction of Extended Care Insurance Benefits for persons who need a specified degree of nursing care in certain institutions, necessitated a change in reporting procedures in Table 3. As a result, the Nursing Home recipients are reported on the basis of coverage by Extended Care or Intermediate Care. (For more detailed information on eligibility and per diem charges see the April 1972 bulletin). Of the total of 3,322 Nursing Home recipients 2,502 or 75.3 per cent were covered by Extended Care Health Insurance.

Table 1 provides a geographic distribution of the number of beneficiaries in February 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.9 per cent of the population in February 1973, it ranged from 0.4 per cent in Halton County Unit and Chinguacousy Township to 4.4 per cent in Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 1.9 and 2.4 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled about \$7.9 million in February 1973 or 11.5 per cent lower than the February 1972 expenditure of about \$8.9 million. A factor contributing to a lower level of expenditure was the noticeable decline in the caseload of family units which have higher budgetary need than that of single persons.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Family Benefits

Family Benefits data are included in the bulletin quarterly. The presentation is similar to that regularly used for General Welfare Assistance data. For example, where appropriate, Family Benefits data have been grouped to conform to General Welfare Assistance Administration Boards. However, totals for the economic regions in the Family Benefits tables reflect the entire region rather than only selected municipalities within the region.

The existing cheque writing system is the source of the Family Benefits data. Accordingly, no adjustment is made for assistance issued but never cashed, assistance suspended after the cheque was prepared but before it was released, and assistance issued manually after the close-off date of the main cheque writing system. Also, the Family Benefits data do not include assistance issued under residual programs (Blind Persons' Allowances, Disabled Persons' Allowances, Widows' and Unwed Women's Allowances and Dependent Fathers' Allowances).

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

It should be noted that for comparative purposes the basic data are reported quarterly. However, additional tables are included on an ad hoc basis, in every issue of the statistical bulletin.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

- (a) Coverage. Individuals without work and seeking work in the

Unemployment Statistics (Continued)

reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 57,722 or 12,140 below the March 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 19.9 per cent and 1.9 per cent respectively. Hostel residents declined by 2.0 per cent. Male headed family units decreased by 25.5 per cent, while female headed family units increased by 6.0 per cent.

The much lower caseload of male headed family units compared to the previous year is reflected in 19.3 per cent reduction in beneficiaries from

HIGHLIGHTS (Continued)

149,294 in 1972 to 120,424 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.5 persons.

In comparison to February 1973, all categories of single persons and family units decreased by 1,248 cases or by 2.2 per cent.

As has been indicated in the April 1972 bulletin, the introduction of Extended Care Insurance Benefits for persons who need a specified degree of nursing care in certain institutions, necessitated a change in reporting procedures in Table 3. As a result, the Nursing Home recipients are reported on the basis of coverage by Extended Care or Intermediate Care. (For more detailed information on eligibility and per diem charges see the April 1972 bulletin). Of the total of 3,040 Nursing Home recipients 2,249 or 74.0 per cent were covered by Extended Care Health Insurance.

Table 1 provides a geographic distribution of the number of beneficiaries in March 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.8 per cent of the population in March 1973, it ranged from 0.5 in Halton County Unit and Chinguacousy Township to 4.4 per cent in Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 1.8 and 2.4 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled approximately \$7.5 million in March 1973 or 14.3 per cent lower than the March 1972 expenditure of about \$8.7 million. A factor contributing to a lower level of expenditure was the noticeable decline in the caseload of family units which have a higher budgetary need than that of single persons.

Family Benefits

Tables 4 - 6 provide a statistical analysis of the Family Benefits program. the Family Benefits data comprise the entire province, as opposed to only the selected areas reported in the General Assistance section.

Table 6 indicates that of the total Family Benefits caseload of 83,107, single persons accounted for 40.8 per cent, family units for 55.1 per cent and others for 4.0 per cent. The 45,818 family units receiving Family Benefits contained 153,588 members or an average of 3.4 persons per family.

As can be seen in Table 5, the number of Family Benefits beneficiaries in March 1973 averaged 2.6 per cent of the population. This represents an increase of 4.0 per cent over the corresponding figure of 2.5 per cent in March 1972.

HIGHLIGHTS (Continued)

Table 4 provides a geographic distribution of the number of beneficiaries in March 1973 in relation to the total population in Ontario. Although the percentage of the population receiving Family Benefits averaged 2.6 per cent, it ranged from 0.3 per cent in Chinguacousy Township to 15.0 per cent in Manitoulin district and was 2.2 per cent and 2.5 per cent for Metropolitan Toronto and the Regional Municipality of Ottawa-Carleton respectively.

* In order to permit comparisons, Family Benefits data have been grouped into General Welfare Assistance administration units.
 ** The above Family Benefits data reflect the entire economic region rather than only selected municipalities within the region.
 *** To be consistent with General Assistance reporting, each foster child has been considered a case.
 **** For Family Benefits data, residents of nursing homes are considered single persons.
 ***** Residents in chronic care hospitals receive a comfort allowance under the Family Benefits Act.

FOREWORD

New Economic Regions

Restructuring of economic regions in Ontario by the Ministry of Treasury, Economics and Intergovernmental Affairs necessitated a change in reporting of the data on the basis of five instead of 10 regions. For the ease of comparison adjustments have also been made in all tables providing historical data by economic region.

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Tables 4 and 5 provide information on approvals granted by the Municipal Welfare Administration Branch for 100 per cent subsidies under Regulation 18. The text of Regulation 18 and comments on the meaning of these tables are to be found on page 4 of the bulletin. Tables 4 and 5 are included in the bulletin quarterly.

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

For comparative purposes the basic data are reported in every issue of the statistical bulletin, while additional tables are included on an ad hoc basis.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that

Unemployment Statistics (Continued)

portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

Unemployment Statistics (Continued)

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two major income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3 total caseload excluding hostel residents, was 55,627 or 11,096 below the April 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 22.3 per cent and 4.5 per cent respectively. Hostel residents declined by 7.4 per cent. Maleheaded family units decreased by 27.2 per cent, while female headed family units remained near the April 1972 level.

The much lower caseload of male headed family units compared to the previous year is reflected in the 19.1 per cent reduction in beneficiaries, from 142,358 in 1972 to 115,232 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.5 persons.

In comparison to March 1973, all categories of single persons and family units decreased by 2,405 cases or by 4.4 per cent.

HIGHLIGHTS (Continued)

As has been indicated in the April 1972 bulletin, the introduction of Extended Care Insurance Benefits for persons who need a specified degree of nursing care in certain institutions, necessitated a change in reporting procedures in Table 3. As a result, the Nursing Home recipients are reported on the basis of coverage by Extended Care or Intermediate Care. (For more detailed information on eligibility and per diem charges see the April 1972 bulletin). Of the total of 3,362 Nursing Home recipients, 2,486 or 73.9 per cent were covered by Extended Care Health Insurance.

Table 1 provides a geographic distribution of the number of beneficiaries in April 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.7 per cent of the population in April 1973, it ranged from 0.4 per cent in Halton County Unit and Chinguacousy Township to 4.3 per cent in Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 1.7 and 2.4 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled about \$7.0 million in April 1973 or 16.8 per cent lower than the April 1972 expenditure of approximately \$8.5 million. A factor contributing to the lower level of expenditure was the noticeable decline in the caseload of family units which have higher budgetary need than that of single persons.

Child Welfare

The Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are tables 6 to 9. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

As is indicated in Table 6, in April, 1973, 852 new admissions accompanied by 876 discharges decreased the total caseload of children in care from 15,319 in March to 15,295. Table 7 indicates that 13,570 family units throughout Ontario received protection and prevention services involving 34,060 children. Tables 8 and 9 provide information on the caseload of children of unmarried parents in care and on services being rendered to them. In April 1973, the total caseload of children of unmarried mothers was 4,411, involving 311 admissions and 314 discharges. Services to unmarried parents and their children involved 2,927 cases, a decline of about 2.5 per cent in comparison to the previous month.

RESIDENCE

Regulation 18 of the General Welfare Assistance Act states:

(1) For the purposes of the Act and this Regulation, where an applicant or recipient during any part of the period of twelve consecutive months immediately preceding his application for assistance,

(a) has not resided in Ontario; or

(b) has resided in Ontario in territory without municipal organization,

the municipality or the council of the approved band that provides assistance to him in accordance with this regulation shall be entitled to reimbursement by the Province of Ontario for the full amount expended for such assistance until such time as he has resided for a period of twelve consecutive months, in Ontario, in territory with municipal organization or on a reserve of an approved band.

(2) Where the municipality or the council of an approved band is entitled to reimbursement under subsection 1, the municipality or council, as the case may be, shall notify the Director within sixty days of the date on which it makes the first payment to the recipient, of the particulars.

The following tables are based on the approvals granted by the Municipal Welfare Branch for 100% subsidy under Reg. 18. Once an approval has been granted, it is effective until the recipient has resided in the municipality for twelve consecutive months. Regulation 18(2) makes it possible for subsidy to be claimed for assistance that was issued up to two months before the request for approval was made. It should be stressed that Tables 4 and 5 provide data on the number of approvals granted for specified months rather than the number of approvals which were effective in those months.

TABLE 4. APPROVALS GRANTED FOR 100% SUBSIDY UNDER REG. 18 FOR FORMER RESIDENTS OF UNORGANIZED TERRITORY, OTHER PROVINCES AND OTHER COUNTRIES, JANUARY 1970 - APRIL 1973

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

For comparative purposes the basic data are reported in every issue of the statistical bulletin, while additional tables are included on an ad hoc basis.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

Unemployment Statistics (Continued)

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two major income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 51,935 or 9,943 below the May 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 24.0 per cent and 3.5 per cent respectively. Hostel residents declined by 4.7 per cent. Male

HIGHLIGHTS (Continued)

headed family units decreased by 27.4 per cent, while female headed family units remained near the May 1972 level.

The much lower caseload of male headed family units compared to the previous year is reflected in the 19.7 per cent reduction in beneficiaries from 132,984 in 1972 to 106,820 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.5 persons.

In comparison to April 1973 all categories of single persons and family units decreased by 2,849 cases or 4.5 per cent.

Table 1 provides a geographic distribution of the number of beneficiaries in May 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.6 per cent of the population in May 1973, it ranged from 0.2 per cent in Chinguacousy Township to 3.4 per cent in Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 1.6 and 1.9 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance Allowances totalled approximately \$7.1 million in May 1973 or 8.0 per cent lower than the May 1972 expenditures of about \$7.7 million. A factor contributing to a lower level of expenditure was the substantial decline in the caseload of family units which have higher budgetary need than that of single persons.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are Tables 4 to 8. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

As is indicated in Table 4, in May 1973, 954 new admissions accompanied by 897 discharges increased the total caseload of children in care from 15,295 in March to 15,352. Table 5 indicates that 13,631 family units throughout Ontario received protection and prevention services

HIGHLIGHTS (Continued)

involving 34,080 children. Tables 6 and 7 provide information on the caseload of children of unmarried parents in care and on services being rendered to them. In May, 1973 the total caseload of children of unmarried mothers was 4,329 involving 286 admissions and 368 discharges. Services to unmarried parents and their children involved 2,676 cases, a decline of 8.6 per cent in comparison to the previous month. As can be seen from Table 8, the total caseload of children on adoption probation in May 1973 was 2,145 or 9 cases below the April 1973 level.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Family Benefits

Family Benefits data are included in the bulletin quarterly. The presentation is similar to that regularly used for General Welfare Assistance data. For example, where appropriate, Family Benefits data have been grouped to conform to General Welfare Assistance Administration Boards. However, totals for the economic regions in the Family Benefits tables reflect the entire region rather than only selected municipalities within the region.

The existing cheque writing system is the source of the Family Benefits data. Accordingly, no adjustment is made for assistance issued but never cashed, assistance suspended after the cheque was prepared but before it was released, and assistance issued manually after the close-off date of the main cheque writing system. Also, the Family Benefits data do not include assistance issued under residual programs (Blind Persons' Allowances, Disabled Persons' Allowances, Widows' and Unwed Women's Allowances and Dependent Fathers' Allowances).

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

It should be noted that for comparative purposes the basic data are reported quarterly. However, additional tables are

included on an ad hoc basis, in every issue of the statistical bulletin.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualifications he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long-term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 50,062 or 10,205 below the June 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 23.5 per cent and 3.7 per cent respectively. Hostel residents declined by 40.1 per cent. Male headed family units decreased by 26.1 per cent, while female headed family units remained near the June 1972 level.

The much lower caseload of male headed family units compared to the previous year is reflected in 17.4 per cent reduction in beneficiaries from 124,258 in 1972 to 102,688 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.5 persons.

In comparison to May 1973, all categories of single persons and family units decreased by 2,107 cases or 4.4 per cent.

Table 1 provides a geographic distribution of the number of beneficiaries in June 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.5 per cent of the population in June 1973, it ranged from 0.2 per cent in Chinguacousy Township to 3.2 per cent in Prescott and Russell County unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional

HIGHLIGHTS (Continued)

Municipality they averaged 1.6 and 2.0 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled approximately \$6.4 million in June 1973 or 19.5 per cent lower than the June 1973 expenditure of about \$7.9 million. A factor contributing to a lower level of expenditure was the substantial decline in the caseload of family units which have a higher budgetary need than that of single persons.

Family Benefits

Tables 4 to 6 provide a statistical analysis of the Family Benefits program. The Family Benefits data comprise the entire province, as opposed to only the selected areas reported in the General Assistance section.

Table 4 provides a geographic distribution of the number of beneficiaries in June 1973 in relation to the total assessed population in Ontario. Although the percentage of the population receiving Family Benefits averaged 2.7 per cent it ranged from 0.4 per cent in Pickering and Chinguacousy Townships to 15.0 per cent in Manitoulin District and was 2.3 per cent and 2.5 per cent for Metropolitan Toronto and the Regional Municipality of Ottawa-Carleton respectively.

As can be seen in Table 5, the number of Family Benefits beneficiaries in June 1973 averaged 2.7 per cent of the assessed population. This represents a decline of 3.6 per cent in comparison to the June 1972 figure of 2.8 per cent.

Table 6 indicates that of the total Family Benefits caseload of 85,956, single persons accounted for 40.6 per cent, Family units for 55.4 per cent and others for 4.0 per cent. The 47,646 family units receiving Family Benefits contained 158,157 members or an average of 3.3 persons per family.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are Tables 8 to 12. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

HIGHLIGHTS (Continued)

As is indicated in Table 8, in June 1973, 908 new admissions accompanied by 1,133 discharges reduced the total caseload of children in care from 15,352 in May to 15,127. Table 9 indicates that 13,502 family units throughout Ontario received protection and prevention services involving 33,849 children. Tables 10 and 11 provide information on the caseload of children of unmarried parents in care and on services being rendered to them. In June 1973, the total caseload of children of unmarried mothers was 4,254 involving 301 admissions and 376 discharges. Services to unmarried parents and their children involved 2,521 cases, a decline of 5.8 per cent in comparison to the previous month. As can be seen from Table 12, the total caseload of children on adoption probation in June 1973 was 2,148 or 11 cases below the May 1973 level.

* In order to permit comparisons, Family Benefits data have been grouped into General Welfare Assistance administration units.

** The above Family Benefits data reflect the entire economic region rather than only selected municipalities within the region.

*** To be consistent with General Assistance reporting, each foster child has been considered a case.

**** For Family Benefits data, residents of nursing homes are considered single persons.

***** Residents in chronic care hospitals receive a comfort allowance under the Family Benefits Act.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Tables 4 and 5 provide information on approvals granted by the Municipal Welfare Administration Branch for 100 per cent subsidies under Regulation 18. The text of Regulation 18 and comments on the meaning of these tables are to be found on page 4 of the bulletin. Tables 4 and 5 are included in the bulletin quarterly.

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

For comparative purposes the basic data are reported in every issue of the statistical bulletin, while additional data are included on an ad hoc basis.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

i.

Unemployment Statistics (Continued)

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

Unemployment Statistics (Continued)

(b) Timing. The labour survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long-term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 49,633 or 9,775 below the July 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 21.5 per cent and 6.1 per cent respectively. Hostel residents declined by 25.6 per cent. Male headed family units decreased by 27.5 percent, while female headed family units trailed less than one per cent behind the June 1972 level.

HIGHLIGHTS (Continued)

The much lower caseload of male headed family units compared to the previous year is reflected in 17.5 per cent reduction in beneficiaries; from 124,882 in 1972 to 102,979 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.5 persons.

In comparison to June 1973, all categories of single persons and family units decreased by 458 cases or 1.0 per cent.

Table 1 provides a geographic distribution of the number of beneficiaries in July 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.5 per cent of the population in July 1973, it ranged from 0.2 per cent in Chinguacousy Township to 3.1 per cent in Prescott and Russell County Unit and Hamilton. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality they averaged 1.6 and 2.2 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled approximately \$6.6 million in July 1973 or 13.0 per cent lower than the July 1972 expenditure of about \$7.5 million. A factor contributing to a lower level of expenditure was the substantial decline in the caseload of family units which have a higher budgetary need than that of single persons.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are Tables 6 to 10. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

As is indicated in Table 6, in July 1973, 930 new admissions accompanied by 1,207 discharges reduced the total caseload of children in care from 15,127 in June to 14,850. Table 7 indicates that 13,312 family units throughout Ontario received protection and prevention services involving 33,359 children. Tables 8 and 9 provide information on the caseload of children of unmarried parents in care and on services being

HIGHLIGHTS (Continued)

rendered to them. In July 1973, the total caseload of children of unmarried mothers was 4,196, involving 325 admissions and 383 discharges. Services to unmarried parents and their children involved 2,385 cases, a decline of 5.4 per cent in comparison to the previous month. As can be seen from Table 10, the total caseload of children on adoption probation in July 1973 was 2,152 or 19 cases below the June 1973 level.

RESIDENCE

Regulation 18 of the General Welfare Assistance Act states:

(1) For the purposes of the Act and this Regulation, where an applicant or recipient during any part of the period of twelve consecutive months immediately preceding his application for assistance,

- (a) has not resided in Ontario; or
- (b) has resided in Ontario in territory without municipal organization,

the municipality or the council of the approved band that provides assistance to him in accordance with this regulation shall be entitled to reimbursement by the Province of Ontario for the full amount expended for such assistance until such time as he has resided for a period of twelve consecutive months, in Ontario, in territory with municipal organization or on a reserve of an approved band.

(2) Where the municipality or the council of an approved band is entitled to reimbursement under subsection 1, the municipality or council, as the case may be, shall notify the Director within sixty days of the date on which it makes the first payment to the recipient, of the particulars.

The following tables are based on the approvals granted by the Municipal Welfare Branch for 100% subsidy under Reg. 18. Once an approval has been granted, it is effective until the recipient has resided in the municipality for twelve consecutive months. Regulation 18(2) makes it possible for subsidy to be claimed for assistance that was issued up to two months before the request for approval was made. It should be stressed that Tables 4 and 5 provide data on the number of approvals granted for specified months rather than the number of approvals which were effective in those months.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and All County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

For comparative purposes the basic data are reported in every issue of the statistical bulletin, while additional data are included on an ad hoc basis.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Unemployment Statistics (Continued)

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) did without work and were seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

Unemployment Statistics (Continued)

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long-term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

HIGHLIGHTS (Continued)

General Assistance

As is indicated in Table 3, total caseload, excluding hostel residents, was 45,812 or 8,498 below the August 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 21.7 per cent and 8.6 per cent respectively. Hostel residents declined by 7.7 per cent. Male headed family units decreased by 28.0 per cent, while female headed family units remained near the August 1972 level.

The much lower caseload of male headed family units compared to the previous year is reflected in 18.4 per cent reduction in beneficiaries; from 125,028 in 1972 to 102,063 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.5 persons.

In comparison to July 1973, all categories of single persons and family units decreased by 620 cases or 1.3 per cent.

Table 1 provides a geographic distribution of the number of beneficiaries in August 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.5 per cent of the population in August, 1973, it ranged from 0.3 per cent in Chinguacousy Township to 3.1 per cent in Hamilton and Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality they averaged 1.6 and 2.3 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled about \$6.5 million in August 1973 or 14.0 per cent lower than the August 1972 expenditure of approximately \$7.6 million. A factor contributing to a lower level of expenditure was the substantial decline in the caseload of family units which have a higher budgetary need than that of single persons.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are Tables 4 to 8. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

HIGHLIGHTS (Continued)

As is indicated in Table 4, in August 1973, 1,014 new admissions, accompanied by 1,013 discharges maintained the total number of children in care at the previous month level. Table 5 indicates that 13,303 family units throughout Ontario received protection and prevention services involving 33,060 children. Tables 6 and 7 provide information on the caseload of children of unmarried parents in care and on services being rendered to them. In August 1973, the total caseload of children of unmarried mothers was 4,194, involving 300 admissions and 302 discharges. Services to unmarried parents and their children involved 2,364 cases, a decline of less than one per cent in comparison to the previous month. As can be seen from Table 8, the total caseload of children on adoption probation in August 1973 was 2,217 or 65 cases below the July 1973 level.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Family Benefits

Family Benefits data are included in the bulletin quarterly. The presentation is similar to that regularly used for General Welfare Assistance data. For example, where appropriate, Family Benefits data have been grouped to conform to General Welfare Assistance Administration Boards. However, totals for the areas in the Family Benefits tables reflect the entire area rather than only selected municipalities within the area.

The existing cheque writing system is the source of the Family Benefits data. Accordingly, no adjustment is made for assistance issued but never cashed, assistance suspended after the cheque was prepared but before it was released, and assistance issued manually after the close-off date of the main cheque writing system. Also, the Family Benefits data do not include assistance issued under residual programs (Blind Persons' Allowances, Disabled Persons' Allowances, Widows' and Unwed Women's Allowances and Dependent Fathers' Allowances).

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

Child Welfare (Continued)

It should be noted that for comparative purposes the basic data are reported quarterly. However, additional tables are included on an ad hoc basis, in every issue of the statistical bulletin.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

Unemployment Statistics (Continued)

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

Income Maintenance

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long-term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards.

Highlights (Continued)

About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 47,635 or 10,208 below the September 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 22.5 per cent and 10.9 per cent respectively. Hostel residents declined by 26.7 per cent. Male and female headed family units decreased by 27.2 per cent and 0.8 per cent respectively.

The much lower caseload of male headed family units compared to the previous year is reflected in 17.9 per cent reduction in beneficiaries; from 121,389 in 1972 to 99,621 in 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.5 persons.

In comparison to August 1973, all categories of single persons and family units decreased by 1,071 cases or 2.3 per cent.

Table 1 provides a geographic distribution of the number of beneficiaries in September 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.5 per cent of the population in September 1973, it ranged from 0.2 per cent in Chinguacousy Township to 3.2 per cent in Hamilton. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality they averaged 1.5 and 2.4 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled about \$6.3 million in September 1973 or 15.3 per cent lower than the September 1972 expenditure of approximately \$7.5 million. A factor contributing to a lower level of expenditure was the substantial decline in the caseload of family units which have a higher budgetary need than that of single persons.

Family Benefits

Tables 4 to 6 provide a statistical analysis of the Family Benefits program. The Family Benefits data comprise the entire province, as opposed to only the selected areas reported in the General Assistance section.

Table 4 provides a geographic distribution of the number of beneficiaries in September 1973 in relation to the total assessed population in Ontario. Although the percentage of the population receiving Family Benefits averaged 2.6 per cent, it ranged from 0.3 per cent in Pickering and Chinguacousy Townships to 15.3 per cent in Manitoulin District and was 2.3 per cent and 2.5 per cent for Metropolitan Toronto and the

Highlights (Continued)

Regional Municipality of Ottawa-Carleton respectively.

As can be seen in Table 5, the number of Family Benefits beneficiaries in September 1973 averaged 2.6 per cent of the assessed population. This represents a decline of 7.1 per cent in comparison to the September 1972 figure of 2.8 per cent.

Table 6 indicates that of the total Family Benefits caseload of 85,483, single persons accounted for 40.6 per cent, family units for 55.6 per cent and other for 3.8 per cent. The 47,526 family units receiving Family Benefits contained 157,172 members or an average 3.3 persons per family.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are Tables 8 to 13. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

As is indicated in Table 8, in September 1973, 892 new admissions, accompanied by 970 discharges reduced the total caseload of children in care from 14,851 in August to 14,773. Table 9 indicates that 13,337 family units throughout Ontario received protection and prevention services involving 33,043 children. Tables 10 and 11 provide information on the caseload of children of unmarried parents in care and on services being rendered to them. In September 1973, the total caseload of children of unmarried mothers was 4,181, involving 248 admissions and 261 discharges. Services to unmarried parents and their children involved 2,332 cases, a decline of 1.4 per cent in comparison to the previous month. As can be seen from Table 12, the total caseload of children on adoption probation in September 1973 was 2,232 or 15 cases above the August 1973 level.

* In order to permit comparisons, Family Benefits data have been grouped into General Welfare Assistance Administration units.

** The above Family Benefits data reflect the entire area rather than only selected municipalities within the area.

*** To be consistent with General Assistance reporting, each foster child has been considered a case.

**** For Family Benefits data, residents of nursing homes are considered single persons.

***** Residents in chronic care hospitals receive a comfort allowance under the Family Benefits Act.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial areas. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

For comparative purposes the basic data are reported in every issue of the statistical bulletin, while additional data are included on an ad hoc basis.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Unemployment Statistics (Continued)

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) did without work and were seeking work, i e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

Unemployment Statistics (Continued)

(b) Timing. The labour survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long-term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits, such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 47,636 or 10,072 below the October 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 19.2 per cent and 9.5 per cent respectively. Hostel residents declined by 13.5 per cent. Male and female headed family units decreased by 28.2 per cent and 4.0 per cent respectively.

Highlights (Continued)

The much lower caseload of male headed family units compared to the previous year is reflected in 19.9 per cent reduction in beneficiaries; from 121,324 in October 1972 to 97,215 in October 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.4 persons.

In comparison to September 1973, there was an insignificant change in total number of single persons and family units.

Table 1 provides a geographic distribution of the number of beneficiaries in October 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.4 per cent of the population in October 1973, it ranged from 0.2 per cent in Chinguacousy Township to 3.1 per cent in Hamilton. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 1.5 and 1.9 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled about \$6.7 million in October 1973 or 7.6 per cent lower than the October 1972 expenditure of approximately \$7.3 million. A factor contributing to a lower level of expenditure was the substantial decline in the caseload of family units which have a higher budgetary need than that of single persons.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are Tables 4 to 8. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

As is indicated in Table 4, in October 1973, 961 new admissions accompanied by 1,140 discharges reduced the total caseload of children in care from 14,773 in September to 14,594. Table 5 indicates that 13,486 family units throughout Ontario received protection and prevention services involving 33,367 children. Tables 6 and 7 provide information on the caseload of children of unmarried parents in care and on services being rendered to them. In October 1973, the total caseload of children of unmarried mothers was 4,113, involving 273 admissions and

Highlights (Continued)

341 discharges. Services to unmarried parents and their children involved 2,403 cases, an increase of 3.0 per cent in comparison to the previous month. As can be seen from Table 8, the total caseload of children on adoption probation in October 1973 was 2,146 or 11 cases above the September 1973 level.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

It should be noted that for comparative purposes the basic data are reported quarterly. However, additional tables are included on an ad hoc basis, in every issue of the statistical bulletin.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Unemployment Statistics (Continued)

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons, who, through the reference week: (a) did without work and were seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

Unemployment Statistics (Continued)

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the Commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance program and the provincially administered Family Benefits program. The latter is designed to assist persons likely to require long term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits, such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 47,826 or 9,100 below the November 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 17.9 per cent and 11.3 per cent respectively. Hostel residents declined by 3.9 per cent. Male headed family units decreased by 27.6 per cent while female headed family units increased by 1.7 per cent.

Highlights (Continued)

The much lower caseload of male headed family units compared to the previous year is reflected in 18.6 per cent reduction in beneficiaries; from 120,580 in November 1972 to 98,146 in November 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.4 persons.

In comparison to October 1973, total single persons and family units increased by 495 cases at 1.1 per cent.

Table 1 provides a geographic distribution of the number of beneficiaries in November 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.5 per cent of the population in November 1973, it ranged from 0.2 per cent in Chinguacousy Township to 3.4 per cent in Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 1.4 and 2.0 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled approximately \$6.4 million in November 1973 or 15.0 per cent lower than the November 1972 expenditure of approximately \$7.5 million. A factor contributing to a lower level of expenditure was the substantial decline in the caseload of family units which have a higher budgetary need than that of single persons.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are Tables 4 to 8. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

As is indicated in Table 4, in November 1973, 888 new admissions accompanied by 987 discharges reduced the total caseload of children in care from 14,594 in October to 14,495. Table 5 indicates that 13,572 family units throughout Ontario received protection and prevention services involving 33,257 children. Tables 6 and 7 provide information on the caseload of children of unmarried parents

Highlights (Continued)

in care and on services being rendered to them. In November 1973, the total caseload of children of unmarried mothers was 4,026, involving 247 admissions and 334 discharges, Services to unmarried parents and their children involved 2,478 cases, an increase of 3.1 per cent in comparison to the previous month. As can be seen from Table 8, the total caseload of children on adoption probation in November 1973 was 2,055 or 89 cases below the October 1973 level.

FOREWORD

General Welfare Assistance

All municipalities with population in excess of 20,000 and all County Welfare Units and District Administration Boards are included in the statistics. Approximately 90 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

For Table 1, municipalities are ranked by the percentage of their population on General Assistance. In Tables 2 to 3 municipalities are grouped by provincial economic regions. Tables 1 to 3 are based on unaudited figures supplied by the municipalities.

Family Benefits

Family Benefits data are included in the bulletin quarterly. The presentation is similar to that regularly used for General Welfare Assistance data. For example, where appropriate, Family Benefits data have been grouped to conform to General Welfare Assistance Administration Boards. However, totals for the areas in the Family Benefits tables reflect the entire area rather than only selected municipalities within the area.

The existing cheque writing system is the source of the Family Benefits data. Accordingly, no adjustment is made for assistance issued by never cashed, assistance suspended after the cheque was prepared but before it was released, and assistance issued manually after the close-off date of the main cheque writing system. Also, the Family Benefits data do not include assistance issued under residual programs (Blind Persons' Allowances, Disabled Persons' Allowances, Widows' and Unwed Women's Allowances and Dependent Fathers' Allowances).

Child Welfare

This section consists of tables providing data pertaining to children in the care of Children's Aid Societies.

Child Welfare (Continued)

It should be noted that for comparative purposes the basic data are reported quarterly. However, additional tables are included on an ad hoc basis, in every issue of the statistical bulletin.

Unemployment Statistics

Based on its labour force survey Statistics Canada estimates the size of the labour force and the number of individuals employed and unemployed. This survey samples 30,000 households chosen by area sampling methods across the country. Indians living on reserves, inmates of institutions and members of the armed forces are excluded from the sample. The definitions and explanations used by Statistics Canada are as follows:

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

Unemployment Statistics (Continued)

The number of unemployment insurance claimants and the estimated number of unemployment insurance beneficiaries is compiled by Statistics Canada from material supplied by the Unemployment Insurance Commission. The number of unemployment insurance beneficiaries is the estimate of the number of claimants who received payment from the Commission during the month.

Differences between the number of unemployment insurance claimants and the number of persons unemployed according to the labour force survey have been explained as follows:

(a) Coverage. Individuals without work and seeking work in the reference week and who were not covered by unemployment insurance (such as new entrants into the labour market) would be considered "unemployed" in the labour force survey but likely would not be an unemployment insurance claimant.

(b) Timing. The labour force survey is conducted at mid-week whereas unemployment insurance data are taken at the end of the month. This difference in timing would be particularly important in periods of rapidly changing employment levels.

(c) Definition. An individual is considered an unemployment insurance claimant when a claim for benefits is registered with the commission, and remains a claimant until 4 - 6 weeks after the claim has been disqualified or benefits cease. If the claim is disqualified and the individual appeals the disqualification he is considered a claimant while the appeal is pending.

The definition used by the labour force survey would consider as employed an unemployment insurance claimant who worked part-time while drawing benefits.

HIGHLIGHTS

The two income maintenance programs available through provincial legislation are the municipally administered General Assistance Program and the provincially administered Family Benefits Program. The latter is designed to assist persons likely to require long term assistance: the aged, widowed, blind, disabled and families where the male head is absent or permanently disabled. The General Assistance program is designed to assist persons who do not qualify for Family Benefits, such as those who are unemployed but employable and separated women with dependent children.

General Assistance

General Assistance statistics are included in the bulletin for all municipalities with population in excess of 20,000 and all

Highlights (Continued)

County Welfare Units or District Administration Boards. About 90.0 per cent of the provincial population resides in an area where General Assistance is administered by a municipality, County Welfare Unit or District Administration Board that is included in the bulletin.

As is indicated in Table 3, total caseload, excluding hostel residents, was 49,627 or 9,175 below the December 1972 level. Compared to that month, male and female single persons, excluding hostel residents, decreased by 16.7 per cent and 11.1 per cent respectively. Hostel residents increased by 16.6 per cent. Male headed family units declined by 25.3 per cent, while female headed family units increased by 2.3 per cent.

The much lower caseload of male headed family units compared to the previous year is reflected in 18.1 per cent reduction in beneficiaries; from 124,640 in December 1972 to 102,089 in December 1973. The term "beneficiary" is more comprehensive than the term "case" because the former covers all members of the family unit who are included in the allowance calculation. The number of members per family receiving General Assistance was at an average of 3.4 persons.

In comparison to November 1973, total single persons and family units increased by 1,231 cases or 2.7 per cent.

Table 1 provides a geographic distribution of the number of beneficiaries in December 1972 and 1973. While the number of General Assistance beneficiaries averaged 1.5 per cent of the assessed population in December 1973, it ranged from 0.3 per cent in Chinguacousy Township to 3.9 per cent in Prescott and Russell County Unit. In large population centres, such as Metropolitan Toronto and Ottawa-Carleton Regional Municipality, they averaged 1.5 and 2.2 per cent respectively.

As can be seen from Table 2, for the areas covered by the bulletin, General Assistance allowances totalled about \$6.3 million in December 1973 or 15.2 per cent lower than the December 1972 expenditures of approximately \$7.5 million. A factor contributing to a lower level of expenditures was the substantial decline in the caseload of family units which have a higher budgetary need than that of single persons.

Family Benefits

Tables 4 to 6 provide a statistical analysis of the Family Benefits program. The Family Benefits data comprise the entire province, as opposed to only the selected areas reported in the General Assistance section.

Table 4 provides a geographic distribution of the number of beneficiaries in December 1973 in relation to the total assessed population in Ontario. Although the percentage receiving Family Benefits averaged 2.6 per cent, it ranged from 0.3 per cent in Pickering and Chinguacousy Townships to 15.0 per cent in Manitoulin District and was 2.2 per cent and 2.5 per cent for Metropolitan

Highlights (Continued)

Toronto and the Regional Municipality of Ottawa-Carleton respectively.

As can be seen in Table 5, the number of Family Benefits beneficiaries in December 1973 totalled 189,418 persons or 8.8 per cent lower than the December 1972 figure. However, the expenditures in December 1973 totalled approximately \$15.6 million or 7.7 per cent higher than the December 1972 outlays of about \$14.5 million.

Table 6 indicates that of the total Family Benefits caseload of 83,311, single persons accounted for 40.8 per cent, family units for 55.5 per cent and others for 3.7 per cent. The 46,196 family units receiving Family Benefits contained 153,303 members or an average of 3.3 persons per family.

Child Welfare

Child Welfare Branch provides financial assistance, advice, supervision and inspection to the Children's Aid Societies throughout Ontario.

Tables included in the bulletin contain a statistical analysis of the Child Welfare program. Of particular interest are tables 9 to 13. They contain basic data on monthly changes in the caseload of children in care, their parents and services provided to them. The other tables provide more detailed analysis of various aspects of the Child Welfare program. They are included in the bulletin on an ad hoc basis.

As is indicated in Table 9, in December 1973, 744 new admissions accompanied by 970 discharges reduced the total caseload of children in care from 14,495 in November to 14,269. Table 10 indicates that 13,526 family units throughout Ontario received protection and prevention services involving 33,334 children. Tables 11 and 12 provide information on the caseload of children of unmarried parents in care and on services being rendered to them. In December 1973, the total caseload of children of unmarried mothers was 3,940, involving 236 admissions and 322 discharges. Services to unmarried parents and their children involved 2,463 cases, a decline by 15 cases in comparison to the previous month. As can be seen from Table 13, the total caseload of children on adoption probation in December 1973 was 2,074 or 19 cases above the November 1973 level.

* In order to permit comparisons, Family Benefits data have been grouped into General Welfare Assistance Administration units.

** The above Family Benefits data reflect the entire area rather than only selected municipalities within the area.

*** To be consistent with General Assistance reporting, each foster child has been considered a case.

**** For Family Benefits data, residents of nursing homes are considered single persons.

***** Residents in chronic care hospitals receive a comfort allowance under the Family Benefits Act.
